New Partnership Aims to Boost Power Outage Predictions

PSU is partnering with Eversource to better predict storm damage and reduce power outages. A new research partnership connects PSU’s meteorology program to the Eversource Energy Center at UConn to bring wind damage predictions to New Hampshire and ultimately predict snow and ice storm damage, using data on past weather and its impact on the grid. The partnership provides hands-on experience for students. PSU offers NH’s only meteorology program, with both undergraduate and graduate degrees, and is home to the Judd Gregg Meteorology Institute.

New DPT Program Welcomes First Cohort in June

PSU’s new Doctor of Physical Therapy program, filled to its 30-seat capacity, features early opportunities for clinical practice sustained throughout the program. It also offers unprecedented collaborative and hands-on activities with partners from across campus, the State of New Hampshire, and beyond through PSU’s new Health and Human Enrichment Strategic Cluster. The new program, NH’s first in public higher education, will help address a high growth rate in the field, aiming to meet regional needs, particularly in the North Country.
