New High-Tech Makerspace Spurs Innovation

Plymouth State's new "makerspace" in the Draper & Maynard building has students dreaming big. The facility boasts state-of-the-industry equipment, providing an extraordinary opportunity for students to work in cutting-edge technology across the entire spectrum of additive manufacturing and design. Students from any major can work on a variety of projects, including robotics, physical computing, health care, theatrical automation, environmental sciences, hydroponics, and more. The makerspace is a regional resource. Plans call for public access, including opening it to local industries over the next year.

Direct Path from Community College to Plymouth State

Plymouth State has broadened its acceptance of community college graduates. Earlier this year, the University started a program for qualified students who earn associate's degrees in liberal arts from the Community College System of New Hampshire to continue their education at PSU. PSU now takes this initiative one step further by guaranteeing admission to students who have earned an associate's degree from any accredited community college.

Please contact [Marcia Schmidt Blaine](#) if you would like more information on the University.
